WHAT TO DO IF YOUR CAR OVERHEATS

1. TURN ON THE HEATER
Drive for a few minutes with the heater on and see if it helps.

2. PULL OVER
If you have GEICO Emergency Roadside Service, call now.

3. BE PATIENT
Wait at least 15 minutes for the engine to cool.

4. ADD COOLANT
- Cover the radiator cap with a towel and slowly loosen it a quarter of a turn.
- Fully open the cap and slowly add coolant (50/50 mix of antifreeze fluid and water) until the liquid reaches the “full” line.
- Replace the cap and turn on the engine.

5. DRIVE TO A SERVICE STATION
Even if the engine has cooled, have a mechanic check your car.

HERE’S WHAT TO KEEP IN THE TRUNK:
- Small, basic tool kit
- 2 quarts of oil
- 1 gallon of coolant (50/50 mix of antifreeze fluid and water)
- Towel
- Heavy-duty gloves
